Drum kit

By firas lamouchi

# TABLE OF CONTENTS

drum kit

about the project

This project simulates a virtual drum kit that generates corresponding sounds of a real drum kit when specific keys are pressed. Each key on the keyboard is mapped to a distinct drum sound, allowing users to simulate drumming by triggering sounds through keyboard interactions. The project utilizes HTML, CSS, and JavaScript to create this interactive experience, presenting a user-friendly interface for playing drum sounds by simply pressing keys on the computer keyboard.
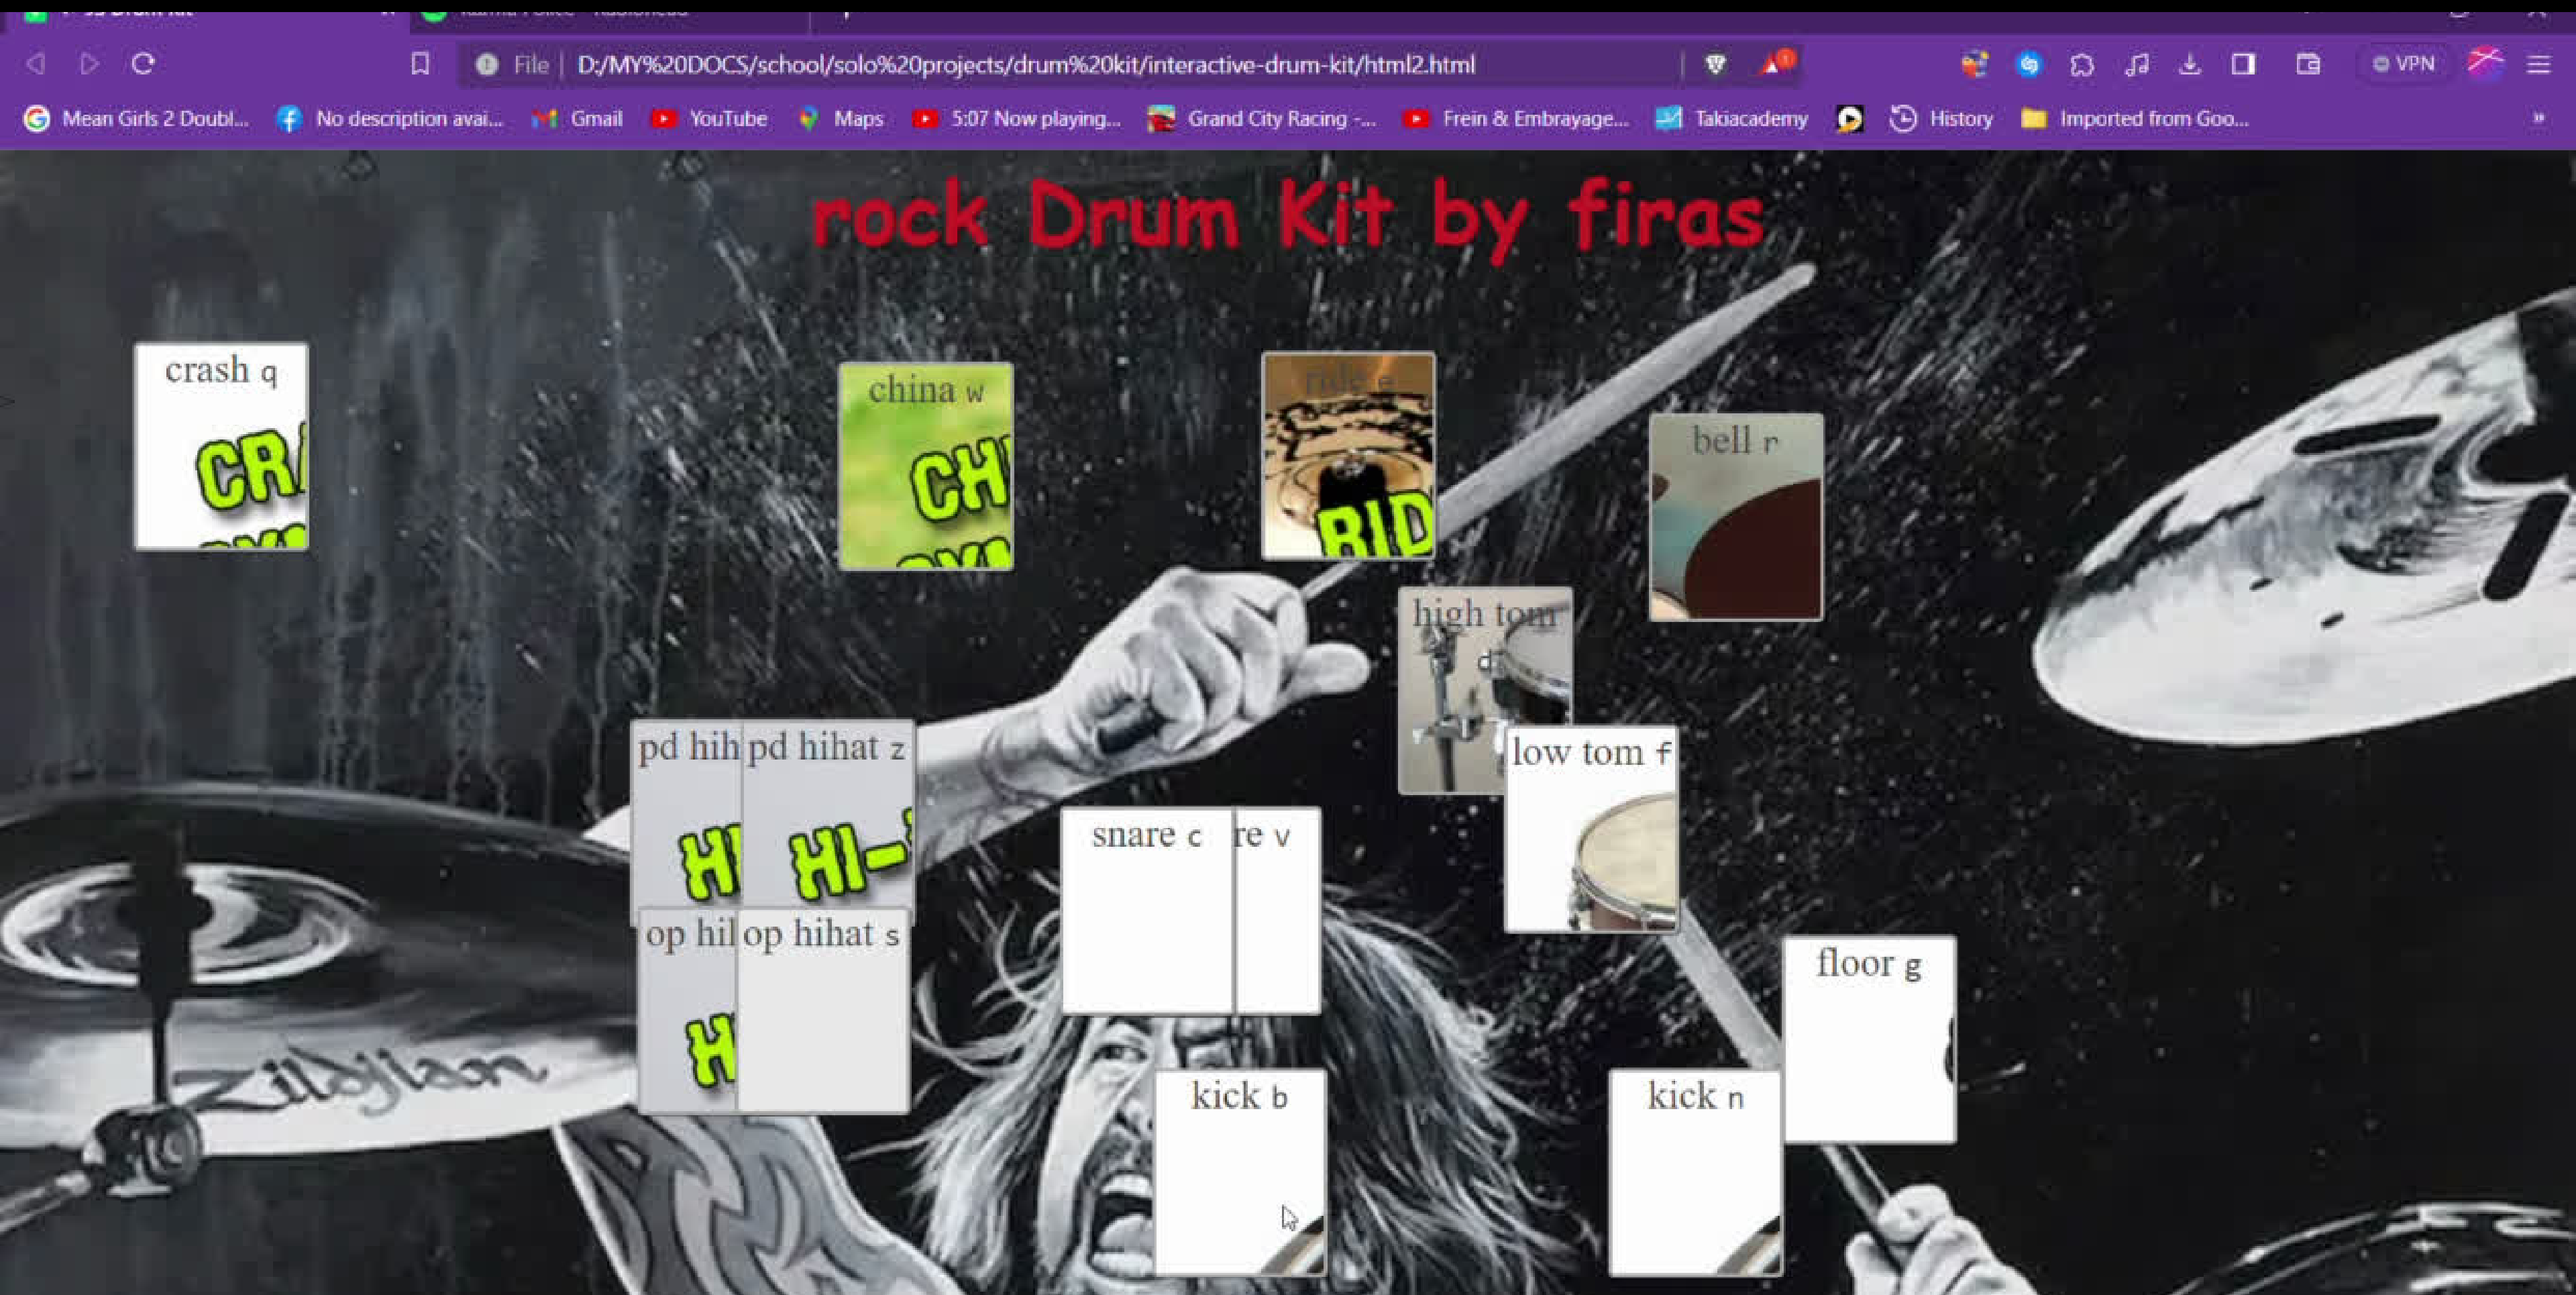

# why i choose this project
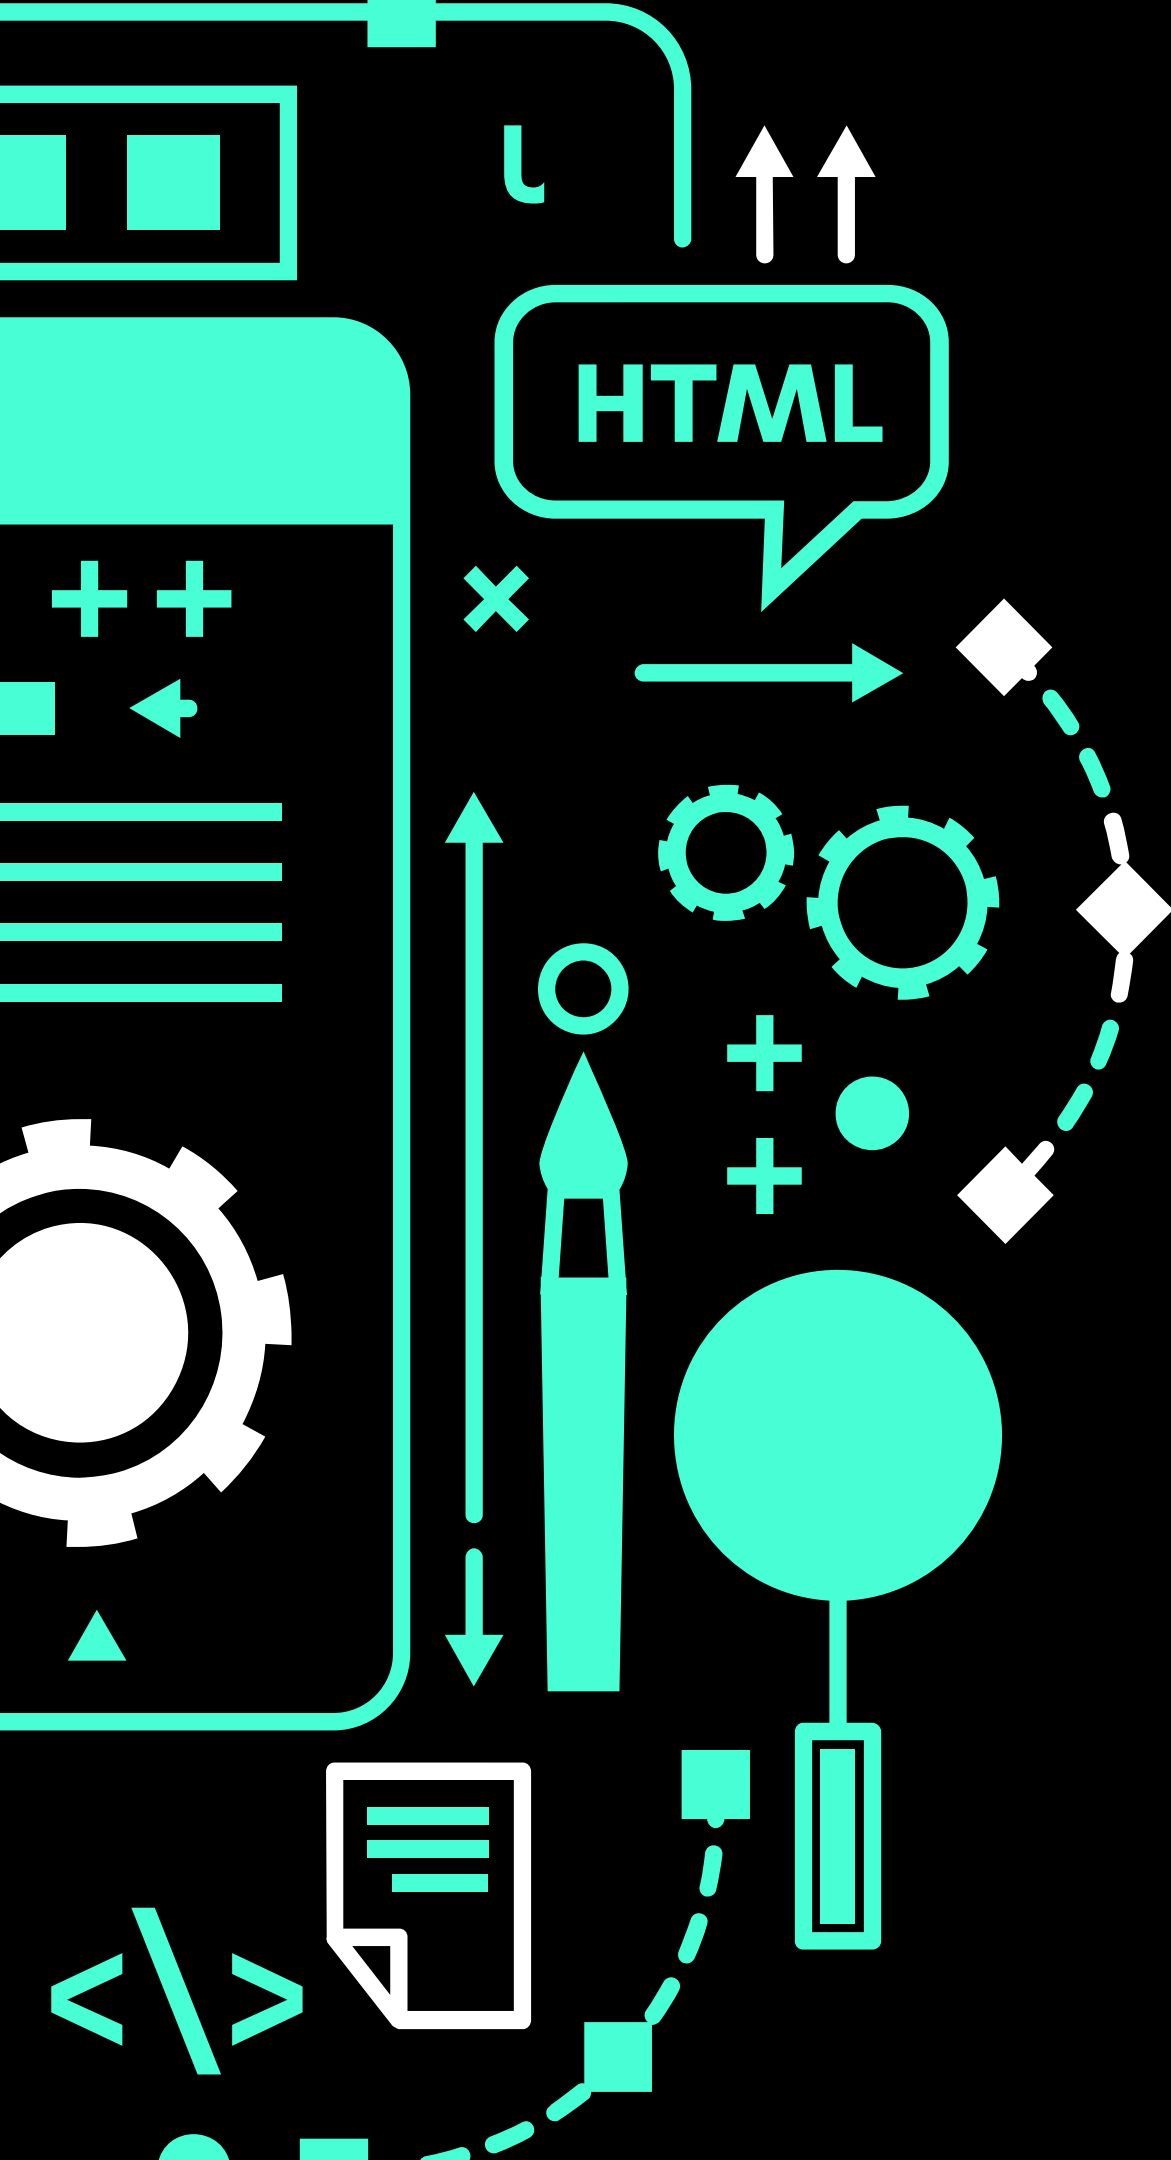

i love music

i enjoy playing drums
